The Speed Size Grader

From fruits to vegetables and nuts, the Speed Sizer will quickly and accurately separate most products. Twelve standard models are designed for different capacities and from two to ten sizes, and by varying the type of roller and several other details the Speed Sizer is customized for each application. We look forward help you find exactly what you need to solve your sizing needs.

Rollers designed for your product

The expanding rollers ride on V-pulleys, rotating and orienting the produce. Overroller turning flaps spread and align the product. Some roller types in use are:

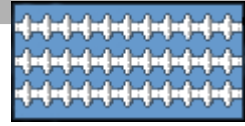

Plastic-covered rollers for most products: potatoes, cucumbers, bell peppers, carrots, etc.

Rubber spools for: round potatoes, onions, oranges, etc.

Urethane rounded spools for: easily bruised apples, tomatoes, etc.

V-shaped spools to separate oval or flat products: mushrooms, strawberries, onions, etc.

Accuracy in sizing

The Speed Sizer is equipped with an roller drive that is selected for your particular sizing needs, the choice is from over 1000 drive patterns currently in use.

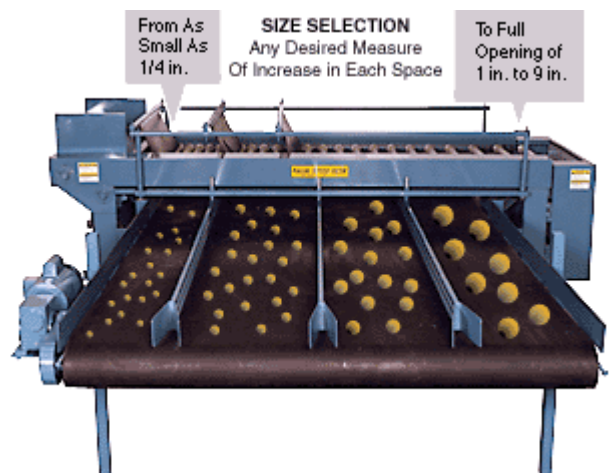

Features

SIMPLE DESIGN - Easy to maintain, easy to adjust, with a unique patented method of roller expansion.

COMPACT AND EFFICIENT - A large capacity in a small floor space, yet rugged enough for field use.

UNEQUALLED ACCURACY - No other diameter grader come close, because of continuous product rotation and individually-driven heavy-duty rollers which maintain precise separation.

PROVEN ABILITY - Customized features and gentle handling are part of the package in hundreds of applications for apples, beets, carrots, citrus, cucumbers, fish, garlic, melons, nuts, olives, onions, peppers, potatoes, radishes, stone fruit, squash, sweet potatoes, tomatoes, and others.
