

**Sweere** are responsible for the marketing and sales of an advanced range of baby leaf and speciality crop harvesting machines. The range has been specially designed for harvesting crops such as parsley, spinach, watercress and baby leaf salads.

The range includes trailed machines on a tractor, to self-propelled machines on tracks. The smaller track machines are walk behind, where the harvested product is fed into trays at the rear, while an operator at the side drives the larger self-propelled machines.

## FEATURES

- The harvested product can either be fed directly into trays or into an elevator which feeds into boxes.
- The trays can be fed to and from the harvester with the use of conveyors.
- Options available include, separation belts and bug sucking equipment.

## BENEFITS

- Increased profits.
- Ability to compete more effectively.

SELF-PROPELLED ON WHEELS  
SELF PROPELLED WALK BEHIND  
HERB HARVESTER  
SELF PROPELLED ON TRACKS WITH  
BUG SUCKER  
SELF PROPELLED ON  
TRACKS
