

## 3-POINT HITCH MOUNTED BELT

The three point hitch mounted harvesting belt conveyor is developed to transport crops in a gentle way.

This heavy duty belt brings the crops carefully to an alongside driving trailer without dropping the product. The belt has a swan neck, is hydraulic driven and is adjustable in speed. The belt is available in working widths of 7m up to 11m, with a standard belt width of 40cm. The conveying and discharge height are hydraulically adjustable.

For road transport, the belt can be pulled in the length direction by mounting a drawing bar and wheels.

Options:

- Own hydraulic system
- Photo-electric cell autostop mechanism
- Working widths of 7 up to 11m
- Various belt types available
