

FOFM

FIELD OPERATED FLORETTING MACHINE

This machine is a pulled type machine, capable of high capacities and quality florets from an easy to use machine. You can switch between broccoli or cauliflower by simply hanging the cutting heads. The machine can floret up to 150 cauliflowers or 100 broccoli's per minute.

The belt with stainless steel cups can be swung over the field. Workers place the crops upside down in these cups, which are then transported into the machine. In the machine the crop is floretted, and transported into boxes or a container.

Features:

- Versatile machine
- Easy switching between different crops
- 2 to 4 cutting heads
- Capacity: up to 6 tons florets / hour
- High quality floretting, due to precision cutting and waste minimization
- Electronically powered cutting heads
- Double or triple axles, optionally with tandem steering
